

# ReverseMode Premium Disclosure

Stay one step ahead

---

## Executive Overview

---

### What does “Premium Disclosure” mean?

Reversemode follows a responsible disclosure whenever a new vulnerability is discovered. It basically means that the vendor is contacted prior to any public disclosure. Once the vendor has addressed the flaw according to its own policy, we release a public advisory with some technical details with the aim of helping researchers understand the real impact of the vulnerability.

On the other hand, those customers who are subscribed to our “Premium Disclosure” service receive full technical details, including comprehensive reports, private exploits and/or tools related, at the same time the vendor is notified.

---

## Vulnerabilities

As a customer of the Premium Disclosure service you receive vulnerabilities affecting Microsoft Windows Vista/XP/2003/2K and other leading products as well.

The basic pack for a vulnerability comprises of the following items:

- Comprehensive paper explaining the flaw. Available in the following languages: English, Deutsch, Castellano.
- Exploit/PoC and/or tools related.
- Up-to-day information about the status of the vulnerability and how the vendor is planning to address the issue.

---

## Advantages of Premium Disclosure

Your company gets informed months before the vulnerability will be publicly disclosed, therefore you can:

- Improve your IPS/IDS engine, signatures or security products.
- Protect your corporate environment.
- Study novel techniques.
- Boost the success rate of your penetration tests.

---
